PROFESSIONAL SUMMARY

Computer Science student at Duke University (Class of 2028) with internship experience building production backend systems, full-stack features, and AI-integrated tooling at real user scale. Track record of shipping reliable, tested code across multiple teams.

EDUCATION

Duke University

Bachelor of Science in Computer Science.

Durham, NC

Expected May 2028

EXPERIENCE

- Software Engineering Intern

Tech Hub Africa LLC

May 2026 – Present

Accra, Ghana

 - Shipped 5+ production features for AfroEventix using WordPress, JavaScript, and custom REST endpoints, improving page-load performance for 1,000+ monthly users.
 - Developed AI-assisted tooling that converted stakeholder requests into scoped architecture proposals across 3+ client projects.
- Software Engineer, Startup Engineering Lead

Product Manager Accelerator

Mar 2026 – Present

Remote / Boston, MA

 - Led full-stack engineering for Heiwa, an AI-powered family OS (React, Supabase, Gemini, Firecrawl); architected logistics parsing from flyers and URLs, owned calendar sync and OAuth integration end-to-end.
- Software Engineering Intern

Nexa Consulting

May 2025 – Aug 2025

Nairobi, Kenya

 - Designed Python/FastAPI REST endpoints and PostgreSQL data models for a 10K+ user product; added Redis caching and query-index optimizations to reduce p95 latency.
 - Implemented JWT authentication and integration tests, raising backend test coverage to 85%+ and reducing production defects.
- Full-Stack Software Developer

Body Flex Gyms

May 2024 – Aug 2024

Nairobi, Kenya

 - Built payment-processing features for 200+ monthly customers, improving database reliability and billing flow stability.

PROJECTS

- Market Microstructure Backtesting Engine

<https://github.com/nigel-andati/Backtesting-Engine>

 - Technologies: C++20, Market Microstructure
 - Built a C++ backtesting engine that replays order-by-order market data through a custom price-time-priority matching engine, simulating realistic fills, slippage, and market impact for trading strategies; parallelized strategy evaluation across independent simulations with a thread pool, achieving 3.85M events/sec throughput with 1.0 μs p99 matching latency.
- Codewright — Automated Bug Fixing & Feature Generation Engine

<https://codewright-zeta.vercel.app>

 - Technologies: Python, LLMs, Docker, FastAPI, GitHub API
 - Engineered an autonomous coding agent using AST analysis to map repositories, plan patches, and validate changes via parallel test orchestration; achieved 100% patch success rate across 5 repositories.
- Semantic Recommendation Algorithm

 - Technologies: Python, LangChain, OpenAI, ChromaDB
 - Built a RAG recommendation service over 7,000+ books using ChromaDB and LangChain, tuning chunking and retrieval.

ACTIVITIES & LEADERSHIP

ColorStack Fellow (2025-Present) | CodePath Fellow (2026-Present) | Global Ambassador, Duke Kunshan University (2024-2025) | Secretary, African & Black Students Association | Varsity Soccer | EA Software Engineering Virtual Experience Program – Forage

SKILLS

- Languages: Python, JavaScript, TypeScript, Java, C++, SQL
- Infrastructure & Data: PostgreSQL, Redis, REST APIs, System Design, ChromaDB
- Frameworks & AI: React, FastAPI, Node.js, LangChain, RAG, LLM APIs
- Cloud & DevOps: AWS (EC2, Lambda, S3), Docker, CI/CD, Git/GitHub, Linux
